COMCAST EXTENDS GIGABIT INTERNET SERVICE IN ADAMS, YORK COUNTIES

***Offers the Fastest Speeds to the Most Homes and Businesses
Over Its Existing Network Infrastructure***

GETTYSBURG, PA – August 8, 2018 – Comcast today announced that it has extended the reach of a new internet service that delivers speeds up to 1 Gigabit-per-second (Gbps) to more residential and business customers in both Adams County and York County. These speeds will be among the fastest and most widely available and include access to the nation's largest Wi-Fi network of more than 19 million hotspots.

This speed was launched in most areas of York County and a small number of eastern Adams County municipalities in early May.

Comcast's new 1 Gigabit Internet service uses DOCSIS 3.1 technology that makes it possible to deliver ultra-fast speeds over the existing communications lines that are already in most homes and neighborhoods. To enjoy the service, all customers need to do is install a new DOCSIS 3.1 cable modem.

In Adams County, this speed is now available in the boroughs of Gettysburg, Arendtsville, Bendersville, Carroll Valley, Biglersville, East Berlin, Bonneauville, Littlestown and New Oxford and the townships of Butler, Cumberland, Franklin, Freedom, Highland, Hamiltonban, Liberty, Menallen, Tyrone, Germany, Hamilton, Mt. Joy, Oxford, Straban, Union, Reading, Huntington, York Springs and Latimore.

In York County, this speed is now available in the boroughs of Seven Valleys, Spring Grove, Jefferson, New Salem, Glen Rock, Shrewsbury, New Freedom and Railroad and the townships of Dover, Paradise, Washington, Warrington, Jackson, Manheim, North Codorus, Codorus, West Manchester, Springfield and Shrewsbury.

"Now more than ever, our customers require the fastest available speeds to support the growing number of devices at home and in the workplace," said Christine Whitaker, Regional Senior Vice President at Comcast. "By using DOCSIS 3.1 cable modem technology, we can now bring gigabit-caliber speeds to the most homes and businesses of any provider across the region."

The everyday price for Residential Gigabit service is \$104.95 a month, without a term contract, and a promotional price of \$89.99 a month for 12 months is being offered. New and existing customers can visit Xfinity.com/gig to learn about the new service and request additional information.

With a 1 Gigabit connection, customers can:

- Download a 5 Gigabyte HD movie in 40 seconds;
- Download a 600 Megabyte TV episode in four seconds;
- Download a 150 Megabyte music album in two seconds; and
- Download 15 Gigabyte video game in two minutes

Comcast Business is also offering DOCSIS 3.1-based internet service to business customers in Adams and York counties. With the continued rollout of its gig-speed network, Comcast's "Business Internet 1 Gig" and "Business Internet 500" speed tiers are now available to business customers in the area using the company's existing network, without the need for any costly or disruptive construction of new network facilities.

Pricing for Comcast Business services varies based on a variety of factors including a business's physical address, number of locations to be served, and the services to which the business currently subscribes. Customers can contact their local Comcast salesperson for more information. Businesses already served by

Comcast can upgrade to Business Internet 1 Gig or Business Internet 500 by visiting business.comcast.com/gig.

Businesses of all sizes are moving to cloud-based operations models and placing a premium on high-capacity, high-performance internet connectivity. DOCSIS 3.1 business internet service from Comcast Business unleashes a new option for accessing gigabit speeds in any business environment – whether a distributed enterprise with locations across the country or a small business with only a handful of locations. The speed and cost efficiencies afforded by Comcast Business's gig-speed network make it ideally suited for businesses across several industries such as retail, healthcare, manufacturing, hospitality, education and government.

Comcast has invested billions of dollars in its network, locally and nationally, to meet consumer demand, and it has now increased speeds 17 times in 17 years, delivering speeds from 15 Mbps up to 2 Gbps for residential customers and up to 10 Gbps for business customers.

Today's announcement follows a number of moves Comcast has made to enhance its high-speed Internet offerings, including an expansion of its national Wi-Fi network, which now includes 19 million hotspots; doubling its network capacity every 18 to 24 months; and introducing xFi, a free platform that lets customers personalize, manage and control their home Wi-Fi experience.

Comcast also offers Internet Essentials, the nation's largest and most comprehensive broadband adoption program that provides low-cost broadband service for \$9.95 a month, digital training and discounted computers for eligible low-income families.

About Comcast

Comcast Corporation (Nasdaq: CMCSA) is a global media and technology company with two primary businesses, Comcast Cable and NBCUniversal. Comcast Cable is one of the nation's largest video, high-speed internet, and phone providers to residential customers under the XFINITY brand, and also provides these services to businesses.
